

**HUMAN DISEASE, JUST HOW MUCH
CAN WE BLAME OUR GENES?**

PART 1 HEART DISEASE AND DIABETES

SPEAKER: DR. TONY RAIZIS

This talk will cover genetic predisposition to heart disease, and the genetic testing offered by CHLabs including LDLR, FDB/FHGS that allow improved clinical management of those affected. The relative burden of genes and the environment towards heart disease, as well as the role of obesity, hypertension, type I and type II diabetes, which are risk factors will also be discussed. The discussion will explain in layman's terms how these disease processes work and what we have learnt from epidemiological and intervention studies.
